IDP 3

By Talal Abu Ghazaleh

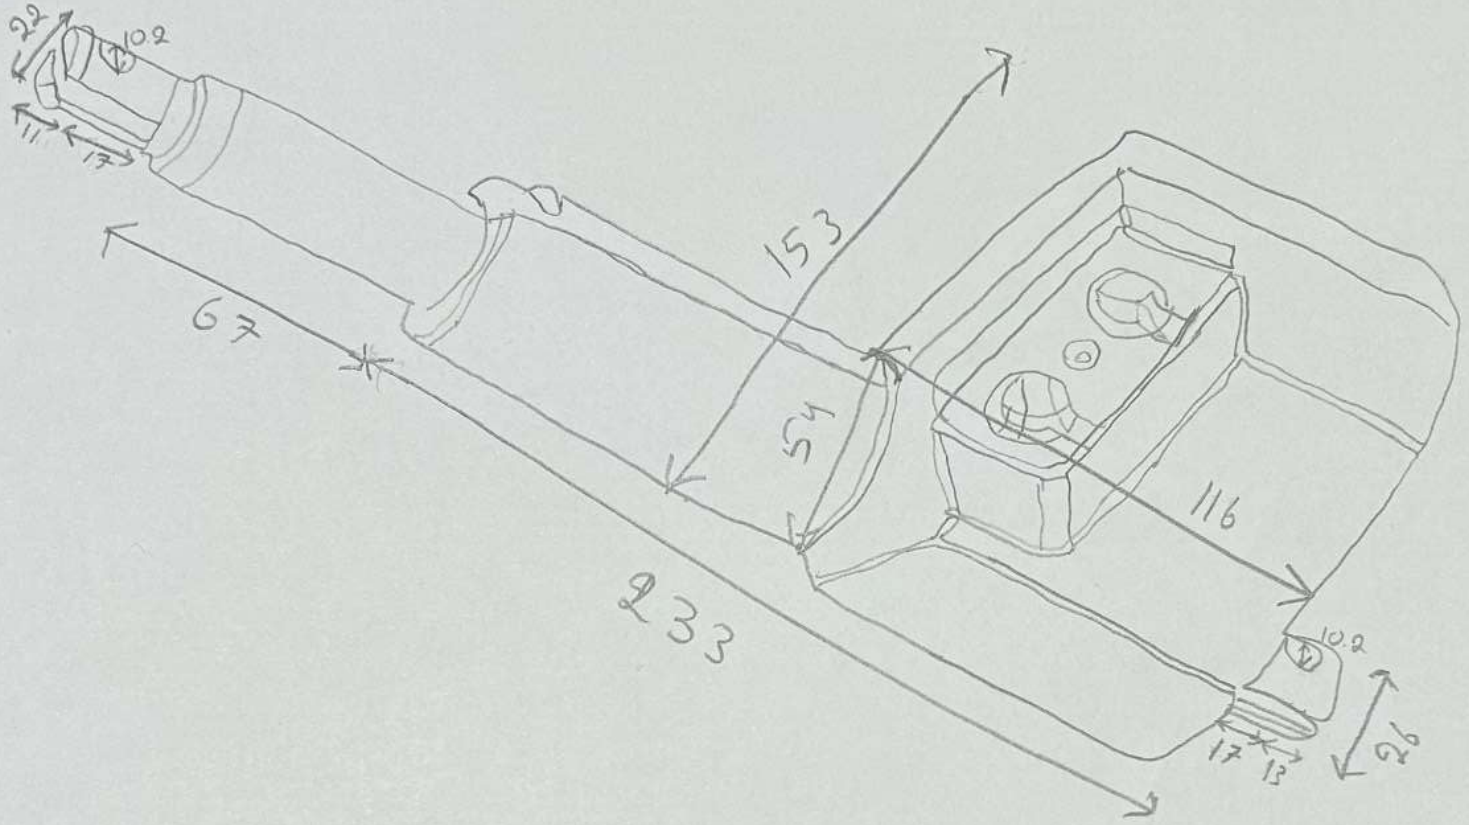

Student template

I did not get any feedback so therefore I will not make a student template (I heard from fellow students that if you don’t get feedback then do not make a student template).

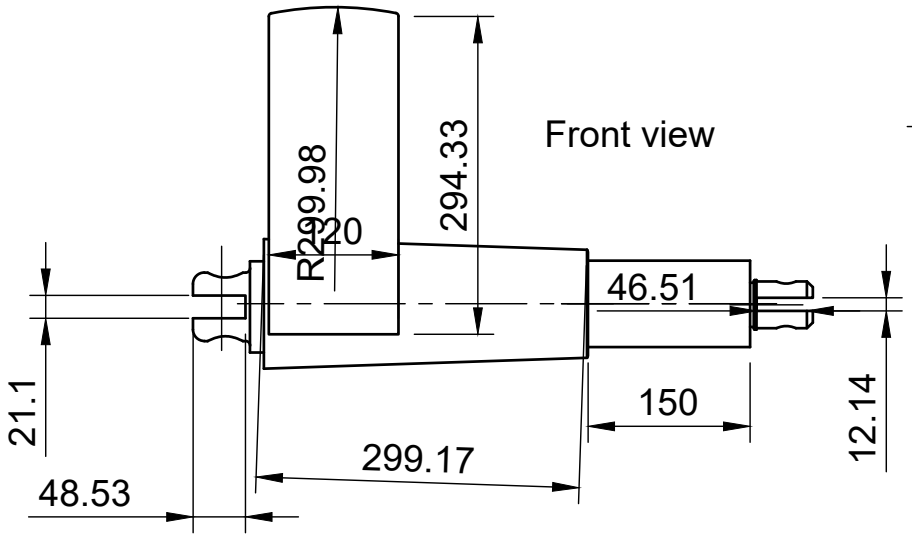

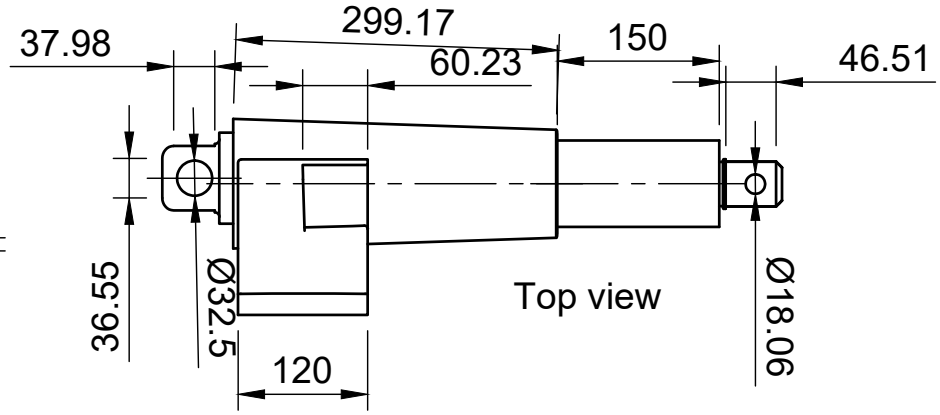

Parts List			
Item	Qty	Part Number	Material
1	1	Back fixtures	Steel
2	1	Piston rod eyes	Steel
3	1	Component1	Steel

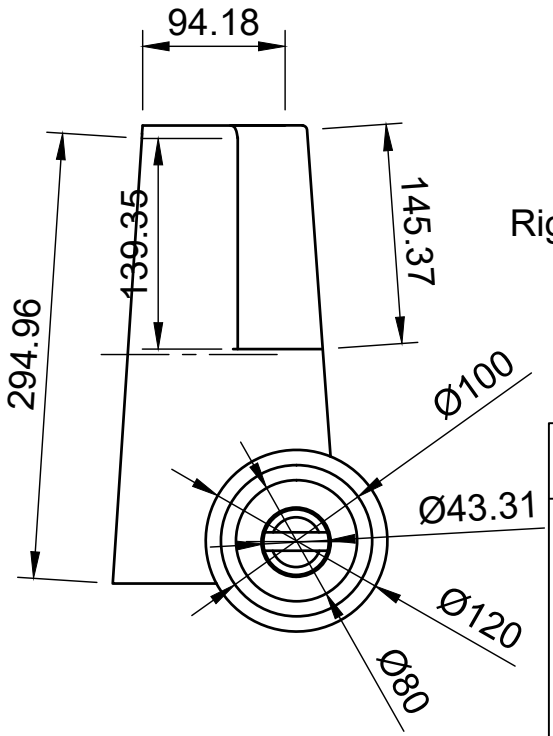

Dept. Mech Engineering	Technical reference	Created by Talal Abu Ghazaleh 12/20/2024	Approved by
When i said Component1, please replace it to 'Housing component'		Document type	Document status
		Title: main body Isometric view	DWG No.
			Rev. / Date of issue / Sheet 1/1

Reflection

This Fusion 360 assignment was honestly one of the most challenging projects I've worked on so far. From the start, I struggled to fully understand what the document was asking me to do. Even after reading it multiple times, I found it difficult to figure out which functions to use for certain tasks. For example, deciding whether to use revolve, extrude, hole, or other similar tools was confusing. I'd sit there thinking, "What exactly does this mean, and how do I even approach it?"

One thing I found particularly hard was extruding and then joining two objects together. It felt like every time I tried, something didn't work the way I expected, and I'd have to undo it and try again. It was frustrating, but I learned a lot from that trial-and-error process. Another issue I faced was with Fusion itself—it felt laggy on my laptop, especially when working on more complex parts. It would take forever to save, which made me nervous because I was always worried I might lose my progress.

Despite these challenges, I feel like I've learned so much about how Fusion 360 works. The project pushed me out of my comfort zone and forced me to figure things out step by step. I still don't think I'm great at using Fusion, but I can see the improvement in how I approach problems now. I feel that with more practice, I'll be able to work on projects like this much faster and with more confidence.
